

Volvo XC 70, MY2006

Page 1 of 1

Rear-facing TA under front
passenger seat

Above: The seat rail has two brackets, which look like TAs, due to the regular practice in Sweden of rear tethering. These won't be discussed in the U.S. or Canadian owner's manuals. These anchors should only be used to rear tether CRs that specifically allow Swedish-style rear tethering, and the hook can be attached directly to this anchor without the need for using the connector strap supplied with the CR.
